What is fLō?

Meet Flo, a Whole-Home Leak Detection System.

Flo is a water monitoring and shutoff system that proactively detects Microleaks™ and other vulnerabilities anywhere in a home's water supply, preventing costly damage by giving the ability to shut-off water remotely.

THE DEVICE:

Installed on the main water supply line, one Flo device monitors water flow, pressure, and temperature in real time, runs automatic Microleak tests to detect vulnerabilities and can automatically shut-off the water if it detects a major leak.

THE APP:

From the iOS or Android app, homeowners can check real time water usage and set conservation goals. If issues are detected, they'll be alerted and can control the Flo from home or away.

THE SERVICE:

If Flo detects an issue and the homeowner is not sure what to do, the Flo team is ready to help find a solution.

Does fLō work with your home?

For a home to work with Flo it needs to meet the following criteria:

Does your home have an accessible water main line above ground?

Hint: If you can access your main shut-off valve, the answer is likely "yes".

Is the main water supply line 1¼ inches or smaller?

Hint: Most U.S. homes are 1¼ inch or smaller.

Do you have a smartphone?

Do you have WiFi?

Do you have a power outlet within 25-50ft of your water main?

How does flo work?

The Flo water monitoring and shut-off system is the first device on the market to capture all pressure, temperature and flow data of water going into a home, whilst using machine learning to understand usage patterns enabling comprehensive, preventative care for the home. From the toilet, shower, and faucet, to the hidden pipes in the walls and foundation, Flo monitors all of them so there's no surprises on the water bill or catastrophes when coming home from work or vacation.

Here's how:

Flo is installed by a plumbing professional on the main water supply line to the home. From there ...

- 1 Flo monitors all pressure, temperature, and flow of the home's water.

- 2 Flo's learns the water usage patterns of the home so it knows the difference between using water and leaking water.

- 3 Flo alerts the homeowners phone (texts, emails, phone calls, whatever is preferred).

- 4 From the Flo app, the homeowner can shut-off the water, clear the alert, get troubleshooting tips, or contact their plumber or Flo Customer Support.

- 5 Flo automatically shuts off the water off if something dangerous is happening.

- 6 Once a day, Flo runs a Microleak test on the home to look for vulnerabilities in the pipes and appliances. This is where Flo finds any small leaks.

- 7 The Flo team is here to help. If there's questions on installation, fixing a problem, understanding notifications, we're here.
